

Let's Help The Environment By Decreasing the use of water

Hello, today I'm going to be writing a paragraph about how to decrease the use of water to help people in Africa and other places.

Okay so the first step is to **check Your toilet for leaks**

The second step is to **stop using your toilet as an ashtray or wastebasket.**

There are endless ways you can save water but I'm telling you 5 steps in this paragraph. Anyways let's continue! so the third step is to **put a plastic bottle in your toilet tank.**

Put an inch or two of sand or pebbles in the bottom of a one-litre bottle to weigh it down. Fill the rest of the bottle with water and put it in your toilet tank, safely away from the operating mechanism. In an average home, the bottle may save five gallons or more of water every day without harming the efficiency of the toilet. If your tank is big enough, you may even be able to put in two bottles.

The fourth step is actually **taking shorter showers, *taking shorter showers actually decreases the use of water a lot so this actually helps.***

The last step of decreasing the use of water in this paragraph is going to be that you can take baths instead of showers and this is a good way to decrease the use of water.
